EXAMINER'S ACTION

SN 995077

Art Unit: 2817

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 20 November 2003 has been entered.

This application is in condition for allowance except for the following formal matters:

In the Specification:

The disclosure is objected to because of the following informalities: Page 3, line 29 & page 11, line 8, note that at each occurrence, "rhombohedrion" should be correctly spelled as ~~rhombohedrion~~ --rhombohedron--. Page 32, line 31, note that "FMTSEC" remains vague in meaning and needs clarification in the specification. Page 45, lines 1, 2, note that "dicotron instability" remains vague in meaning and needs clarification in the specification. Appropriate correction is required.

In the Drawings:

The drawings are objected to because reference labels should be provided for those drawings depicting schematic aspects of the invention. In general, the drawing figures should contain reference labels corresponding to those described in the specification. Likewise, any new reference labels added to the drawing figures should be correspondingly added to the specification's description of the drawing figures. A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Art Unit: 2817

In the Claims:

The following claims have been found objectionable for the reasons set forth below:

In claim 1, last paragraph, third line therein, note that a --,-- should follow "section" and "to" should be deleted and replaced by --wherein some of said electrons-- for a proper characterization; fourth line therein, "and" should be deleted and replaced by --to-- & "to" should be deleted and replaced by --said additional electrons-- for consistency of description; fifth line therein, note that --further-- should precede "additional" for clarity of description; sixth line therein, note that " N_{RF} periods" should be replaced by --a time t -- for consistency with the amended equation; ninth line therein, note that "and" should be deleted as being unnecessary; last line therein, note that the phrase --and ω is the radian RF frequency-- should be added to complete the definition of parameters in the amended equation.

In claim 9, line 6, note that --at least a-- should precede "first" for consistency of description; line 10, note that "N is an integer greater than or equal to one" should now be deleted as being unnecessary and the "," (i.e. after " δ_1 ") should be deleted as being unnecessary.

Comments:

Contrary to applicant's assertions, the objections to the specification and drawings remain outstanding since no amendments to the specification and no new drawings incorporating any changes thereto appear to have been filed in the response of 20 November 2003.

Allowable Claims:

Claims 1-8; 9 are allowable over the prior art of record.

Art Unit: 2817

Prosecution on the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

A shortened statutory period for reply to this action is set to expire **TWO MONTHS** from the mailing date of this letter.
